### DETAILED ACTION

## Claim Rejections - 35 USC § 102

 The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(e) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- Claims 10, 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Kijima et al. (US 6,661,451).

Regarding claim 10, Kijima et al. discloses an electric camera comprising:

an image sensing device (CCD 12, figure 1, column 3, lines 25-34; column 4, line 57 – column 5, line 42) with a light receiving surface having N vertically arranged pixels and an arbitrary number of pixels arranged horizontally, N being equal to or more than three times the number of effective scanning lines M of a display screen of a television system;

a driver (figure 1, column 3, lines 25-34; column 4, line 57 – column 5, line 42) to drive the image sensing device to vertically mix or cull signal charges accumulated in individual pixels of K pixels to produce, during a vertical effective scanning period of the television system, a number of lines of output signals which corresponds to 1/K the number of vertically arranged pixels N of the image sensing device, K being an integer equal to or less than an integral part of a quotient of N divided by M; and

Art Unit: 2622

a signal processing unit (image processing portion 26, figure 1, column 2, lines 62-67) having a function of generating image signals by using the output signals of the image sensing device.

Regarding claim 12, Kijima et al. discloses a trigger device (trigger 46, figure 1, column 3, lines 16-25; column 4, lines 1-16) such as a shutter button, wherein, when a trigger is produced by the trigger device, the signal charges accumulated in individual pixels of the image sensing device are not cyclically mixed but are read out independently for all pixels.

#### Allowable Subject Matter

Claims 11, 17-21 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Regarding claim 11, the prior art of the record fails to show or fairly suggest an electric camera comprising:

a driver including a first driver mode to drive the image sensing device to vertically mix or cull signal charges accumulated in individual pixels of every K pixels to produce a number of lines of output signals which corresponds to the number of effective scanning lines M, K being at least one of integers equal to or less than an integral part of a quotient of N divided by M;

said driver also including a second driver mode to drive the image sensing device to vertically mix or cull signal charges accumulated in individual pixels of every K pixels to produce, during a vertical effective scanning period of the television system, a number of lines of output signals which corresponds to I/K the number of vertically arranged pixels N of the image

sensing device, K being an integer equal to or less than an integral part of a quotient of N divided by M; and

wherein the driving by the first driver mode and the driving by the second driver mode are selectively switched according to input information from a switch provided inside or outside the electric camera.

Claims 17-21 are allowed as being dependent from claim 11.

4. Claims 13-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

## Conclusion

 The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Nishimura et al. (US 7,154,539).

Parulski et al. (US 5,828,406).

Sugihara (US 4,054,915).

Ohtsubo et al. (US 5,170,249).

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to LUONG T. NGUYEN whose telephone number is (571)272-

7315. The examiner can normally be reached on 7:30AM - 5:00PM.
